PLP PITCH DECK • FIRST DRAFT

CODEBRIDGE

From learning code to building a career.

A practical software engineering platform connecting learners to guided projects, mentors, and entry-level opportunities.

BUILD • SHIP • GROW

Founder: [Your Name] | PLP

Learning to code is not the same as becoming job-ready

Many aspiring developers get stuck between online lessons and real-world software work.

Too much theory

Learners watch tutorials but have limited experience building complete, useful applications.

Little feedback

Without a mentor or code review, small mistakes become habits and motivation can fade.

Unclear pathway

Beginners struggle to turn projects into a portfolio, internships, or paid opportunities.

The gap: accessible practice + human guidance + evidence of skills.

CodeBridge turns learning into visible progress

One guided pathway from beginner fundamentals to a portfolio of working software.

01

LEARN

Short lessons in programming, Git, databases, APIs, and testing.

02

BUILD

Project briefs that grow from small exercises to real applications.

03

GET FEEDBACK

Mentor sessions, peer reviews, and clear improvement checklists.

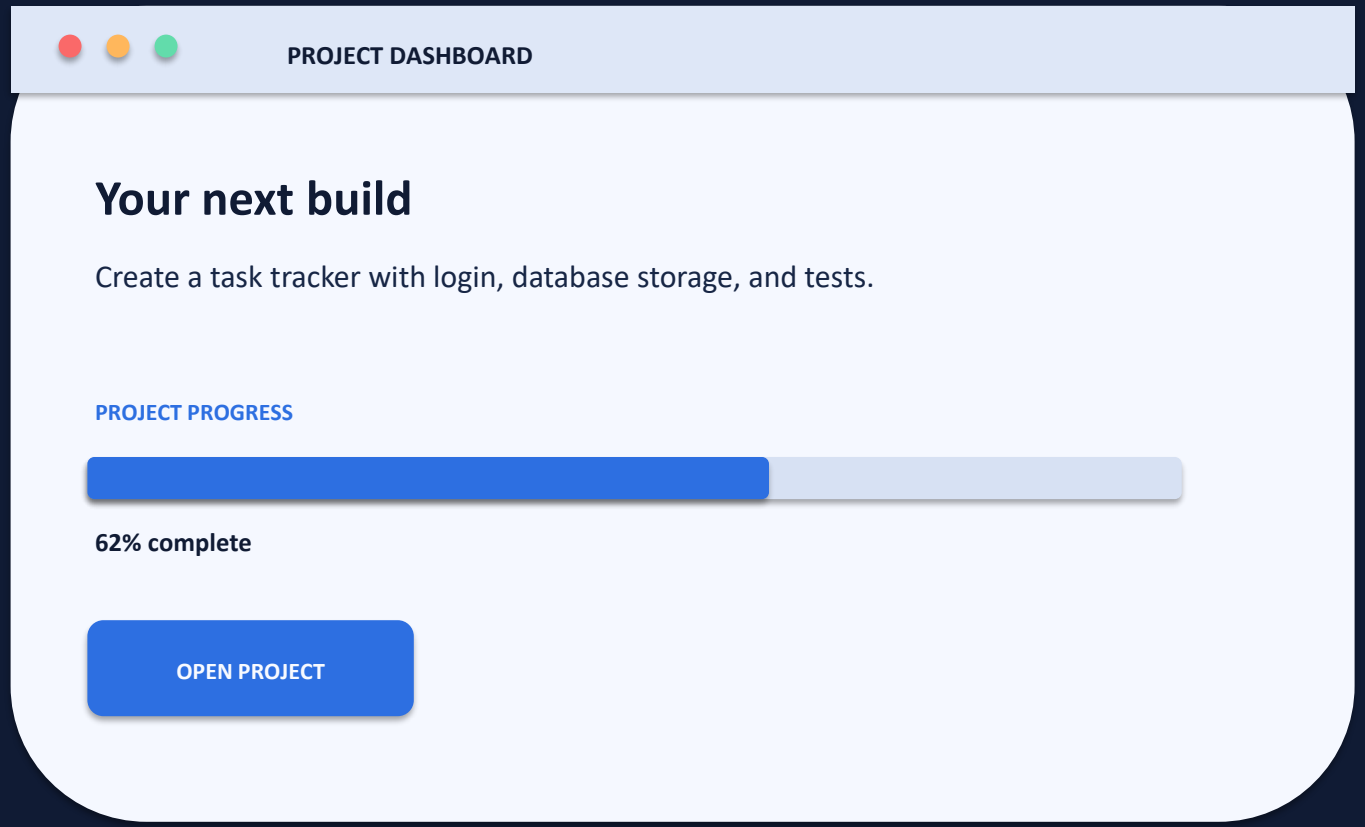

04

SHOW PROOF

A public portfolio with demos, source code, and project reflections.

A simple workspace for building software

The first version focuses on a small set of features that create consistent practice.

Learning path

Weekly milestones and practical tasks.

Mentor feedback

Review notes and next steps.

Portfolio builder

Collect demos and project evidence.

Start with learners who need a bridge to opportunity

A focused initial audience helps CodeBridge test the model and improve quickly.

Primary users

Students and self-taught beginners who know basic concepts but need hands-on practice.

Partner users

Schools, training centres, youth programmes, and community learning hubs.

Opportunity partners

Small businesses, startups, and employers seeking motivated junior talent.

Initial focus: one pilot cohort of 30–50 learners, supported by volunteer mentors.

A scalable model for practical digital skills

Begin locally, prove learner outcomes, then expand through institutional partnerships.

TAM • Broad need

People seeking accessible digital and software skills across Africa and beyond.

SAM • Reachable segment

Learners reached through online communities, schools, NGOs, and training partners.

SOM • First pilot

30–50 learners in one cohort, with measurable completion and portfolio outcomes.

Market sizing figures will be validated during customer discovery; no unsupported market estimates are used in this draft.

Keep core learning accessible; charge for added value

A blended model can support affordability while building a sustainable service.

Free starter tier

Intro lessons, selected projects, community access, and a basic portfolio.

Paid cohort / mentor tier

Structured cohort support, deeper code reviews, and career preparation.

Institutional partnerships

Schools and organisations sponsor learner cohorts and progress reporting.

Potential future revenue: employer-sponsored challenges and recruitment partnerships, with learner consent.

Differentiate through guided practice and accountability

CodeBridge complements free content instead of trying to replace every learning platform.

Option	Content	Personal feedback	Portfolio pathway
Video tutorials	Strong	Limited	Self-managed
Coding challenge sites	Strong practice	Limited	Partial
Bootcamps	Structured	Often strong	Strong
CodeBridge (proposed)	**Project-led**	**Mentor + peer**	**Built-in evidence**

Our advantage is the combination—not a single feature: projects + feedback + proof of skill.

Earn trust through a small, measurable pilot

A phased launch limits cost and gives the team evidence before scaling.

1. **1 • RECRUIT** — Partner with 2–3 learning hubs; select 30–50 learners.
2. **2 • RUN PILOT** — Deliver an 8-week project sprint with weekly mentor sessions.
3. **3 • SHOW RESULTS** — Publish demos, learner stories, completion data, and feedback.
4. **4 • EXPAND** — Use evidence to secure sponsors and recruit more mentors.

Measure outcomes before claiming success

As an early-stage concept, CodeBridge will use a pilot to validate its impact.

30–50
pilot learners

8 weeks
guided sprint

3 projects
target portfolio

70%+
target completion

Pilot scorecard

- Completion rate and weekly active participation
- Number of working projects and code reviews completed
- Learner confidence before and after the cohort
- Portfolio quality and next-step outcomes at 3 months

Build lean, learn fast, improve with partners

The first milestone is proof that learners finish projects and value the support.

Weeks 1–2

Interview learners and mentors; finalise project briefs and learning path.

Weeks 3–10

Run pilot cohort, track progress, collect feedback, and improve the platform.

Weeks 11–12

Evaluate results, share demos, and prepare the next cohort and funding plan.

Founding team (draft roles)

Product / software lead • Learning & mentor lead • Community / partnerships lead

Roles can start part-time and be filled by collaborators or volunteers during the pilot.

Help us turn potential into proof.

We are seeking pilot partners, volunteer mentors, and seed support to run the first CodeBridge cohort.

PARTNER

Connect us with a school, hub, or youth programme.

MENTOR

Give learners feedback on real software projects.

SPONSOR

Support devices, connectivity, and cohort delivery.

Next step: agree on a pilot partner and recruit the first cohort.
